

Job Report

No matter where your location – ARCTOS is close to you.

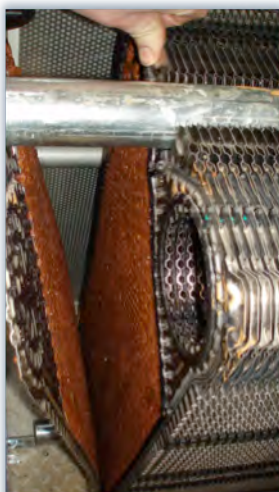

ARCTOS installation

Installation by all our technicians, located throughout Germany, is coordinated from Sörup. Our technicians have many years practical **experience** and work as refrigeration system installation technicians or as service technicians. They maintain and repair your refrigeration systems and compressors according to the manufacturer's recommendations. Our engineers are qualified to advise you irrespective of the manufacturer of your compressors or the supplier of your refrigeration system.

Customer satisfaction is ARCTOS' highest priority so work is carried out with prior mutual consultation to avoid trouble during production or stoppage of your installations.

For the **safety** of all concerned, ARCTOS has been voluntarily certified according to SCC ** on the basis of our safety handbook. SCC maintains international standards with regard to safety, health and environment for technical services.

We carry out **maintenance and repair work**. For this the parts which are subject to wear and tear are inspected and, if necessary, replaced. Installations are checked for tightness and corrosion, heat exchangers are cleaned and your system is repaired according to the latest technology.

When signing a **maintenance contract** you can be sure that the maintenance will be carried out on schedule and you will know the costs in advance. Individual orders of engineering work are also possible at any time.

Our service team plans and organises the acquisition and delivery of **spare parts** for maintenance, repair and conversion of your system. We can also supply **operational fluids**, e.g. refrigerant, compressor oil and heat transfer liquids, proper waste disposal included.

In addition to our nationwide service on site, ARCTOS repairs compressors (reciprocating or screw) and motors made by well-known manufacturers in our **compressor workshop in Glinde**.

There, qualified specialist staff repair compressors. You profit from the many years of experience of our technicians and from their detailed knowledge of most models.

Further ARCTOS responsibilities

In addition to repairs, we submit **offers**, **make design calculations** and **analyse damage**.

For fast equipment exchanges we have a large number of **bare shaft compressors** available which have been overhauled in our works.

Additionally we check your systems in accordance with **regulations**, we are at your disposal for **staff training** and we secure your production with **spare refrigeration** systems during rebuilding / damage or production peaks.
